

Coconino County & Flagstaff

Economic Base Analysis

The economic base technique is grounded in the assumption that the local economy can be divided into two very general sectors: (1) a basic (or non-local) sector or (2) a non-basic (or local sector).

- **Basic Sector:** This sector is made up of local businesses (firms) that are entirely dependent upon external factors. For example, McDonald Douglas in Apache Junction, Arizona sells its helicopters to the US government. Their business is dependent almost entirely upon non-local firms, the US government, Department of Defense. McDonald Douglas does not sell its “Apache” attack helicopters to families or households locally, so their business is very much dependent upon exporting their goods. Manufacturing and local resource-oriented firms (like logging or mining) are usually considered to be basic sector firms because their fortunes depend largely upon non-local factors, they usually export their goods.
- **Non-basic Sector:** The non-basic sector, in contrast, is composed of those firms that depend largely upon local business conditions. For example, a local grocery store sells its goods to local households, businesses, and individuals. Its clientele is locally based and, therefore its products are consumed locally. Almost all local services (like drycleaners, restaurants and drug stores) are identified as non-basic because they depend entirely on local factors.

Economic base theory assumes that all local economic activities can be identified as basic or non-basic. Economic base theory also suggests that the local economy is strongest when it develops those economic sectors that are not closely tied to the local economy. By developing firms that rely primarily on external markets, the local economy can better insulate itself from economic downturns because, it is hoped, these external markets will remain strong even if the local economy experiences problems. In contrast, a local economy wholly dependent upon local factors will have great trouble responding to economic slumps. The economic cycles of boom and bust mining towns are a good example of where the external economic impacts cause the decline of the local economy.

Economic Base Analysis Techniques

There are three basic ways to analyze the strengths/weaknesses, specializations, and overall diversity of the local economy. The three methods are simple but popular techniques to determine the diversity of and specialization of the local economy:

- I. Assumption Technique: By far the simplest economic analysis technique estimates basic sector employment by using a fundamental set of assumptions about the local economy. Here the analyst decides based upon established knowledge of the local economy what industries are basic or non-basic. A drawback of this technique is all employment is determined as either basic or non-basic.
- II. Location Quotient Technique: the LQ technique determines the level of basic sector employment by comparing the local economy of a larger geographic unit such as the state or the US.
- III. Minimum Requirements Technique: Slightly more complex method that compares the local economy with the economies of a sample of similarly sized regions.

All three methods are applicable, however, the location quotient technique is the most commonly utilized base analysis method. The technique compares the local economy to a reference economy, in the process attempting to identify specializations in the local economy.

Location Quotient

Location Quotients (LQs) are ratios that allow an area's distribution of employment by industry to be compared to a reference or base area's distribution. The reference area is usually the U.S., but it can also be a state or a metropolitan area. The reference or base industry is usually the All industry total. The discussion below assumes the defaults are used. LQs also allow areas to be easily compared to each other.

LQs are calculated by first, dividing local industry employment by the all industry total of local employment. Second, reference area industry employment is divided by the all industry total for the reference area. Finally, the local ratio is divided by the reference area ratio.

If an LQ is equal to 1, then the industry has the same share of its area employment as it does in the reference area. An LQ greater than 1 indicates an industry with a greater share of the local area employment than is the case in the reference area. For example (assuming the Arizona as the reference area), Flagstaff will have an LQ greater than 1 in the commercial logging industry the LQ for Coconino county is 4.02 more than four times the state proportion.

An LQ of 1.0 suggests that the local employment is exactly sufficient to meet the local demand for a good or service. Therefore, all of this employment is also considered non-basic because none of these goods or services are exported. In Coconino County, Retail Stores - General merchandise has a LQ of .99.

An LQ that is greater than 1.0 provides evidence of basic employment for a given industry. When a $LQ > 1.0$ it can be concluded that local employment is greater than expected and it is therefore assumed that this "extra" employment is basic. These extra jobs then must export their goods and services to non-local areas which, by definition, makes them Basic sector employment.

A LQ of less than 1.0 suggests that local employment is less than was expected for a given industry. Therefore the industry is not even meeting the demand for a given good or service. Therefore all of this employment is considered non-basic. Not all local (county, regional) economies have all the industry sectors active in their region and will yield LQs of 0, as is the case of agricultural crop production in Coconino County. However, when looking at the natural resource industries such as commercial logging,

An LQ of 1 means that the area under consideration (Coconino County in this case) has the same percentage of employment in that industry as does the area it is being compared to (in this case, Arizona). Coconino County industries with LQs close to 1.0 include:

- Fluid power process machinery manufacturing
- Dog and cat food manufacturing
- Surgical appliance and supplies manufacturing
- Sanitary paper product manufacturing
- Turbine and turbine generator set units manufacturing
- Heating equipment (except warm air furnaces) manufacturing
- Laminated plastics plate, sheet (except packaging), and shape manufacturing
- Cookie, cracker, and pasta manufacturing
- Mining gold, silver, and other metal ore
- Musical instrument manufacturing
- Transport by pipeline
- All other miscellaneous wood product manufacturing
- Confectionery manufacturing from purchased chocolate
- Hotels and motels, including casino hotels
- Surgical and medical instrument, laboratory and medical instrument manufacturing
- Boat building
- Upholstered household furniture manufacturing
- Other Federal Government enterprises
- Industrial gas manufacturing
- Commercial logging
- Pottery, ceramics, and plumbing fixture manufacturing
- Museums, historical sites, zoos, and parks
- Amusement parks, arcades, and gambling industries
- Urethane and other foam product (except polystyrene) manufacturing
- Book publishers
- Sporting and athletic goods manufacturing
- Transport by rail
- Environmental and other technical consulting services
- General and consumer goods rental except video tapes and discs
- Other amusement and recreation industries
- Other plastics product manufacturing
- Employment and payroll only (state & local govt, education)
- Warehousing and storage
- Other state and local government enterprises
- Employment and payroll only (federal govt, non-military)
- Other accommodations
- Miscellaneous nonmetallic mineral product manufacturing
- Transport by water
- Personal and household goods repair and maintenance
- Grant making, giving, and social advocacy organizations

- Retail Stores - Gasoline stations
- Scenic and sightseeing transportation and support activities for transportation
- Bowling centers
- Automotive equipment rental and leasing
- Scientific research and development services
- Other rubber product manufacturing
- Private hospitals
- Independent artists, writers, and performers
- Food services and drinking places
- Video tape and disc rental
- Performing arts companies
- Animal production, except cattle and poultry and eggs
- Retail Stores - Sporting goods, hobby, book and music
- Showcase, partition, shelving, and locker manufacturing
- Other personal services
- Cutting tool and machine tool accessory manufacturing
- Poultry and egg production
- Religious organizations
- Doll, toy, and game manufacturing
- Private household operations
- Individual and family services
- Water, sewage and other treatment and delivery systems
- Retail Stores - Clothing and clothing accessories
- Lighting fixture manufacturing
- Newspaper publishers
- Automotive repair and maintenance, except car washes
- Retail Stores - Food and beverage
- Veterinary services
- Fitness and recreational sports centers
- Community food, housing, and other relief services, including rehabilitation services
- Soft drink and ice manufacturing
- Cattle ranching and farming
- Offices of physicians, dentists, and other health practitioners
- State and local government electric utilities
- Broadcast and wireless communications equipment manufacturing
- Mining and quarrying stone
- Retail Stores - Building material and garden supply
- Retail Stores - Miscellaneous
- Mining and quarrying sand, gravel, clay, and ceramic and refractory minerals
- Medical and diagnostic labs and outpatient and other ambulatory care services
- Retail Non-stores - Direct and electronic sales
- Motion picture and video industries

The largest location quotients occur for (1) Fluid power process machinery manufacturing, (2) Dog and cat food manufacturing, (3) Surgical appliance and supplies manufacturing, (4) Sanitary paper product manufacturing, and (5) Turbine and turbine generator set units manufacturing. All these industries are located near or in Flagstaff i.e. Wisconsin Tissue, in Belmont. State and local government education employment in Coconino County is 2.48 which means that the proportion of employment in the state and local government sector is twice as high as the state. Similarly, federal government employment (USGS, USFS, BOR etc.) has a location quotient of 2.38, twice the state average.

The LQ is often used to determine basic and non-basic industries in economic base studies. Basic industries are those in which the LQ is greater than 1.0.

While the LQ can be a very useful tool some words of caution are in order. First, LQs can vary considerably from year to year. Second, LQs can be very different depending on the data source used. Third, LQs can vary depending on the level of aggregation of industries. The tables below are at the lowest levels of aggregation. Finally, LQs will vary considerably if wage or income data rather than employment are used to calculate the LQs.

An alternative to simply using location quotients is a technique termed shift-share analysis which attempts to calculate how sectors of the economy have shifted over time, as new opportunities have emerged and as old sectors have declined. The difficulty with this analysis is finding accurate data at lower levels. The BEA County Business Patterns data is normally used for this analysis and this data set is updated bi annually. If shift-share is done over a larger region i.e. the northern half of Arizona it may show changes in base employment that are not noticeable at the local level. However, in a community like Flagstaff, employment shifts at the local level are noticed far quicker by the local Workforce Investment Board than by bi annual shift share analysis. A good example of a shift share is an article by James P. Quintero, "Regional Economic Development: An Economic Base Study and Shift Share Analysis of Hays County, Texas", 2007. Dr. Lay Gibson, emeritus professor at the University of Arizona has performed economic base studies for a majority of Arizona counties and these studies can be found on the internet.

As the Flagstaff economy accounts for between 50 and 60 percent of Coconino County output, the county location quotient is probably reasonable. A comparison of the County of Flagstaff LQ to the surrounding counties in Northern Arizona may be useful. Another alternative may be to compare Coconino to other rural counties with urban areas removed as this may show significant differences in location dominant industries. However, all economic activity in Arizona is mitigated by Maricopa County and LQ's for industrial sectors are adversely affected.

Source of data for the following tables are employment matrices from the Implan software, derived from the County Business patterns of the Bureau of Economic Analysis (BEA).

Location Quotient for Coconino County, reference area is Arizona, extended NAICS codes:

Sector Description	AZ	Coconino	% AZ	% Coco	LQ
Total	3,376,989	72,132	100	100	1.00
Oilseed farming	0	0	0.0%	0.0%	0.00
